

Pick a Door. Any Door.

The DirecDoor PoE Controller from GE Security provides simplified access control installation for up to two doors

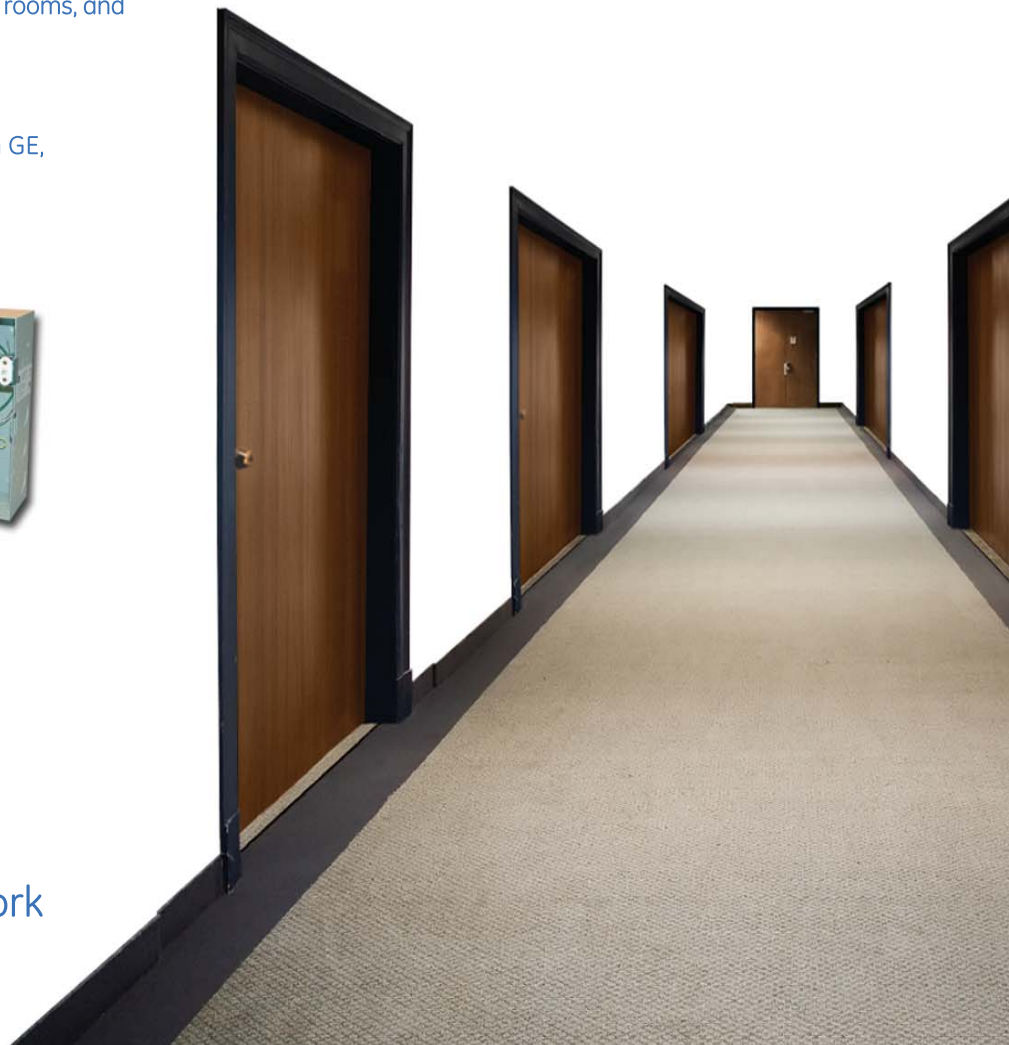

The DirecDoor™ IP-connected access controller combines two reader and two door capability with Power over Ethernet (PoE) functionality. Unlike IP readers, installation is easy, cost effective and secure, since both the wiring and the card database remain safe within the protected space.

- Seamless software integration
- PoE-supplied power for two complete door installations
- Weigand and Supervised F/2F reader compatible
- Fire panel connection for emergency egress
- Ideal for extending electronic access control to any doors still secured by lock and key
- Typical installations include C-Suite offices, laboratory spaces, supply closets, utility rooms, and even remote outbuildings

So, go ahead, pick a door, any door...
with the DirecDoor PoE controller from GE,
you're sure to pick a winner.
